

Description

Interfacing Leap Motion with Arduino

<Build Diagram>

1. Upload StandardFirmata to the Arduino.
2. Install node.js from <http://www.nodejs.org/>
3. Make private folder to build this project.
4. Install web socket module with "npm install ws --save" (npm install command).
5. Install johnny-five module with "npm install johnny-five --save".
6. There might be directory named 'node_module'.
7. In the parent folder you made at first, unzip my attachment.
8. In 'LeapHand' directory, type "make run" .
9. Ask if there is any problem. ☺
